RISK ASSESSMENT CERTIFICATION

Medley	
3.12.88	3.12
Order:	X 4.9

The Region IV risk assessment staff has reviewed the PRP-generated risk assessment for the Medly Farm Drum Dump NPL Site SC for compliance with current Agency health risk guidance and policy. Comments were conveyed to the Potential Responsible Parties (PRP) through the Remedial Project Manager and appropriate changes/corrections have been incorporated into a revised risk assessment in the Feasibility Study document. In accordance with the requirement of OSWER Directive No. 9835.15 (8/28/90), it has been determined that the final risk assessment conservatively conveys the upperbound cancer and the systemic toxicity risks posed through all reasonably likely current and future exposure scenarios by contaminants identified at this site. Therefore, it is acceptable to the Agency.
